PITCH.md

Business Case, Value Proposition & Pitch Frameworks

For translating design work into business language and building compelling stakeholder narratives. Covers the Value Proposition Canvas, pitch deck structure, ROI measurement, and AI-assisted content generation using Gamma.app.

---

1. Value Proposition Canvas

Use this to ensure product design is solving real customer problems — and to build the foundation of any pitch.

Customer Profile

Step 1 — Customer Jobs *(what they're trying to achieve)* AI Prompt:

```
Generate a list of functional, social, and emotional jobs for [target user]
trying to [achieve goal].
Functional jobs = practical tasks they need to complete
Social jobs = how they want to be perceived
Emotional jobs = how they want to feel
Product context: [describe product]
```

Step 2 — Customer Pains *(frustrations, blockers, risks)* AI Prompt:

```
What are the biggest pains experienced by [target user] when trying to
[achieve goal]?
Categorize as: Undesired outcomes / Obstacles / Risks
Rank by severity (high / medium / low).
Be specific — avoid generic answers like "it's confusing."
```

Step 3 — Customer Gains *(desired outcomes and benefits)* AI Prompt:

```
What gains does [target user] want when [achieving goal]?
Categorize as: Required gains / Expected gains / Desired gains / Unexpected
gains
Focus on measurable or observable outcomes where possible.
```

Value Map

Step 4 — Products & Services — List your core features/capabilities

Step 5 — Pain Relievers AI Prompt:

```
For each of these customer pains: [paste pains]
Describe how [product name] relieves that pain.
Be specific — connect each pain directly to a feature or design decision.
Flag any pain we currently don't address.
```

Step 6 — Gain Creators AI Prompt:

```
For each of these customer gains: [paste gains]
Describe how [product name] creates that gain.
Rate our strength on each gain: Strong fit / Partial fit / Gap
Suggest one product enhancement for each gap.
```

Fit Assessment

```
Review this completed Value Proposition Canvas: [paste canvas summary]
Assess the fit:
1. Which pains are we relieving most strongly? (evidence-based)
2. Which gains are we creating most effectively?
3. Where is the fit weakest?
4. What's the single most compelling value proposition statement we should
lead with?
Write a one-sentence value proposition: "[Product] helps [target user]
[achieve job] by [key mechanism] so they can [ultimate gain]."
```

---

2. Pitch Deck Structure

Standard structure for a product/design pitch. Adapt based on audience (internal stakeholder vs. client vs. investor).

Slide Framework

Slide	Purpose	Key Content
1. Hook	Grab attention	Provocative stat, problem statement, or user

Slide	Purpose	Key Content
		quote
2. Problem	Define the pain	Specific, relatable, evidence-backed
3. User	Make it human	Persona or real user story
4. Market Opportunity	Show the size	Market data, trend, underserved segment
5. Solution	Your answer	Product demo, key screens, core value prop
6. How It Works	Explain the mechanism	Flow diagram, key interaction
7. Evidence	Prove it works	Research findings, test results, metrics
8. Business Model	Show the money	Revenue model, pricing, unit economics
9. Roadmap	Show momentum	MVP → V1 → V2 milestones
10. Team / Ask	Close the loop	Credentials + what you need from this audience

AI Assist — Pitch Narrative Generator (Gamma.app or Claude)

```
Help me write a pitch narrative for [product name].
Audience: [investors / internal stakeholders / client / board]
Product: [description]
Target user: [description]
Key problem: [description]
Our solution: [description]
Evidence we have: [research findings, test results, metrics]
Ask: [funding / approval / resources / sign-off]

Write a 10-slide narrative arc. For each slide: slide title, 3-bullet
content, and one data point or quote to include.
Tone: [confident / visionary / pragmatic — pick one]
```

AI Assist — Hook Slide Generator

```
Write 3 opening hook options for a pitch about [product/problem].
Audience: [description]
```

```
Each hook should be: unexpected, specific, and make the audience feel the
problem.
Format options:
A) A surprising statistic
B) A user story (30 seconds to read aloud)
C) A provocative question
```

---

3. ROI & Business Case for Design

Use when you need to justify design investment to a business stakeholder.

Design ROI Framework

Map design decisions to business metrics:

Design Decision	User Outcome	Business Metric
Simplified onboarding	Users complete setup faster	Activation rate ↑
Clearer CTA copy	More users take desired action	Conversion rate ↑
Reduced error states	Fewer support contacts	Support cost ↓
Improved navigation	Users find features faster	Feature adoption ↑
Accessibility improvements	More users served	TAM expansion

AI Assist — ROI Case Builder

```
I made this design change: [describe change]
Here is the before/after data: [paste metrics if available]
Target audience for this business case: [VP Product / CFO / client / board]

Build a business case:
1. Problem cost (what the old design was costing — in users, revenue, or
time)
2. Solution impact (what the new design delivers — be conservative)
3. Investment required (design time, dev time)
4. Projected ROI (timeline to value)
```

```
5. Risk of not acting
Format for a 2-minute verbal pitch + 1 supporting slide.
```

Key Metrics by Project Type

Project Type	Metrics to Track
Onboarding redesign	Activation rate, time-to-value, drop-off by step
Feature redesign	Feature adoption, task completion rate, support ticket volume
Navigation overhaul	Time on task, search usage rate, feature discoverability
New product	Retention (Day 1, 7, 30), NPS, conversion rate
Research-informed redesign	Qualitative: theme resolution rate / Quantitative: chosen above

---

4. Building Decks in Gamma.app

Gamma Workflow for Fast Pitch Decks

1. Start with the Claude pitch narrative prompt above — get your 10-slide outline first
2. Open Gamma → "Generate presentation"
3. Paste your narrative outline into Gamma's AI input
4. Choose a visual theme that matches the product's brand tone
5. Review each slide: replace placeholder content with your actual data
6. Use Gamma's "Remix" feature to adjust tone or structure
7. Export as PDF for stakeholder delivery or present live via Gamma link

Gamma Prompt Tips

- Give Gamma a clear narrative arc — it performs better with structured input than free-form descriptions
- Specify the audience in your prompt: "This is for a VP audience who values speed and business impact"
- If slides feel generic, add specific details: product name, actual metrics, real user quotes

- Use Gamma's image generation for conceptual visuals; replace with real screenshots for later-stage pitches

AI Assist — Gamma Slide Content Polish

```
Here is a rough slide for my pitch: [paste slide content]
Audience: [description]
Rewrite it to be:
- Cleaner (fewer words, same meaning)
- More specific (replace vague claims with data or examples)
- More compelling (lead with the insight, not the context)
Output: Revised headline + 3 bullet points. Max 8 words per bullet.
```

---

5. Advocating for AI Tools Internally

Use when pitching AI tool adoption to a team or organization.

The Advocacy Framework

1. **Start with a pain, not a tool** — "We spend X hours on Y task" beats "we should use AI"
2. **Show, don't tell** — Run a live demo with a real project example
3. **Quantify the gain** — Time saved, quality improved, bottleneck removed
4. **Address the fear** — Data privacy, job replacement, quality control
5. **Propose a pilot** — Low-risk, time-boxed, with clear success criteria

AI Assist — Internal Advocacy Pitch

```
Help me write an internal pitch for adopting [AI tool] at [company/team
level].
Current pain: [what takes too long or costs too much]
Tool solution: [what the tool does / how it solves the pain]
Audience concerns: [list likely objections: cost / privacy / learning curve /
job security]
Pilot proposal: [what you want to test, for how long, with what success
criteria]

Output:
1. One-paragraph executive summary
2. Objection-handling table (objection → response)
```

```
3. Pilot proposal outline
4. Success metrics for the pilot
```
