SKILLS.md

Skill File Index

A reference map of all available skill files in this project system. Use this to quickly identify which file to open for any given task.

Quick Decision Matrix

You need to...	Open this file
Start any new Claude conversation	`context.md` → fill in and paste
Start a new project from scratch	`design.md` → Project Kickstart section
Frame a research brief	`research.md` → Brief Framework
Run a user interview or survey	`research.md` → Recruit & Collect section
Synthesize raw research data	`research.md` → Analyze & Synthesize section
Write a prompt for Claude, Figma Make, Stitch, or Antigravity	`prompts.md` → by task type
Debug or optimize a user flow	`prompts.md` → Flow Optimization prompts
Write microcopy for UI	`prompts.md` → Microcopy section
Use Antigravity with Google Drive data	`prompts.md` → Antigravity section
Build a pitch deck or investor story	`pitch.md` → Pitch Structure
Create a Value Proposition Canvas	`pitch.md` → VPC section
Justify design decisions to stakeholders	`pitch.md` → ROI & Business Case
Check if an AI feature is ethical / trustworthy	`design.md` → Designing for Trust checklist

You need to...	Open this file
Choose the right AI tool for a task	`skills.md` → Tool Selection Guide (below)
Hand off designs to development	`handoff.md` → Design Handoff section
Hand off research to stakeholders	`handoff.md` → Research Readout section
Document a design decision	`handoff.md` → Design Rationale Template
Organize a Figma file for handoff	`handoff.md` → Figma File Organization

Tool Selection Guide

Use this to pick the right tool before starting any task.

For Prototyping & UI Generation

Tool	Best For	Avoid When
Figma Make	Refining existing Figma files with AI; component generation; high-fidelity iteration	Starting from zero with no existing design system
Stitch	High-fidelity interactive prototypes; user flow simulation; AI-driven interaction design	Quick low-fi wireframe sketches
Figma (manual)	Design system work; final production-ready screens; handoff	Rapid exploratory ideation

For Research & Synthesis

Tool	Best For	Avoid When
Claude	Brief framing, synthesis, insight clustering, persona refinement, report writing, prompt-based tasks	Real-time transcription

Tool	Best For	Avoid When
Antigravity (Google)	Research that lives in Google Drive, Docs, Sheets, or Meet; cross-file synthesis; workspace-integrated workflows	Standalone tasks with no Google data source
Miro / FigJam	Affinity mapping, journey mapping, collaborative synthesis	Individual solo analysis

For Presentations & Communication

Tool	Best For	Avoid When
Gamma.app	Fast AI-generated pitch decks: draft narrative in Claude first, paste into Gamma	Highly branded, pixel-perfect slide design
Figma	Designed presentations with custom visual identity	Speed-to-first-draft scenarios

For Writing & Content

Tool	Best For
Claude	All written deliverables — briefs, reports, pitch narratives, microcopy, prompt writing, handoff docs

---

Skill File Descriptions

`context.md`

Fill-in-the-blank project context template. Paste at the start of every Claude conversation. Captures project name, user, business goal, current stage, what you need, and tools in use. Highest-frequency file in the system.

`design.md`

The end-to-end UX/product design process. Covers project kickstart, information architecture, user flows, prototyping strategy, AI ethics/trust checklist, and AI integration at each phase. Start here for any new project.

`research.md`

Full user research workflow: from writing the brief and recruiting participants, through interviews and surveys, to synthesis, insight clustering, and handoff. Includes AI-augmented steps at every phase.

`prompts.md`

A ready-to-use prompt library organized by task: briefs, personas, journey maps, Stitch/Figma Make screens, microcopy, flow debugging, synthesis, Antigravity/Google Workspace, and stakeholder communication. Includes a personal log at the bottom for prompts you've tested and want to keep.

`pitch.md`

Business case and stakeholder communication frameworks. Includes the Value Proposition Canvas, pitch deck structure, ROI measurement, Gamma.app workflow, and how to translate design impact into business language.

`handoff.md`

Everything needed to close a project phase cleanly. Covers developer handoff checklists, annotation generation, research readout structure, design rationale documentation, stakeholder presentation structure, and Figma file organization standards.

Skill File Maintenance

When you develop a new reusable prompt, workflow, or framework — add it to the appropriate skill file. Keep entries concrete and action-oriented. Remove anything that hasn't been used in 3+ projects.
